INK #0A0A0A
PERIOD #00875A
PAPER #F6F6F6

MASTERS → brand/logo/

The system

01

Seven files, four jobs. Nothing else is the logo. If a situation isn't covered here, the answer is the tile — it works on anything.

FILE	JOB	MIN SIZE	NOTES
ace-mark.svg	Naked mark	24px wide	Headers, merch, anywhere with its own clearspace. The default when there's no box.
ace-tile.svg	App icon, light UI	16px	The universal fallback. Use on photography, colour, or any surface you don't control.
ace-tile-dark.svg	Dark UI	16px	Ink tile with a paper hairline so the edge reads on a dark ground.
ace-tile-dark-inverted.svg	OS dark icons	16px	Paper tile. Reserved for platform dark-mode icon slots — not a general-purpose variant.
ace-favicon.svg	16–24px	16px	Dot enlarged to 0.7R so it survives. Never use above 24px.
ace-wordmark.svg	The name, set	96px wide	Upright. Below 96px the e's aperture closes — switch to the mark.
ace-wordmark-dark.svg	Wordmark on dark	96px wide	Paper strokes. The period does not change.

Construction

02

Everything is derived from **R**, the bowl radius (31 units). Never redraw by eye — use the masters.

THE MARK · A LEANS -11° ABOUT (5,12)

CAP

CENTRE

BASELINE

DOT 0.58R

Bowl stroke 0.71R (22). Stem 22×88, rx 11. Dot r18 at (82,38) — its underside sits on the baseline, y=56.

THE WORDMARK · UPRIGHT, NEVER LEANED

GAP 10u

GAP 4u

GAP 8u

a at 0 · c centre 104 · e centre 180.93 · period centre 248.93.
Optical gaps 10 / 4 / 8 — they are not equal on purpose.

Clearspace & minimum size

03

CLEARSPACE = R ON ALL FOUR SIDES

Nothing enters this box — not type, not rules, not another logo, not the edge of the page. When in doubt, give it more.

MINIMUM SIZES — MEASURED, NOT GUESSED

96 · fine

40 · fine

24 · floor

<24 · favicon cut

- Mark: **24px** wide. Below that the dot closes up — switch to the favicon cut, where it grows to 0.7R.
- Wordmark: **96px** wide. Below that the e's 17.9u aperture fills in and it reads as a blob.
- Print: mark **8mm**, wordmark **32mm**. Embroidery: **25mm** minimum, tile only.

The lean

04

The **a** leans –11°. The box and the period never do. And the wordmark never leans at all — the letter leans when it's alone; the word stands together.

Colourways

05

Six approved. The period stays #00875A in every one of them except the two monochrome cases, where it takes the single ink.

PAIR	CONTRAST	VERDICT
Ink on paper / paper on ink	18.32	Body-text safe everywhere.
Period on paper	4.21	Clears the 3:1 graphic-control floor.
Period on dark ground	4.24	Same value, both modes. Never re-tint it.
Period on the ink tile	4.35	The most common condition — it lives inside the tile.

Backgrounds

06

The naked mark needs a plain ground with 4.5:1 against the ink. Everything else — photography, colour, pattern, video, anything you don't control — takes **the tile**. That is what the tile is for, and it is never the wrong answer.

On an emerald ground the period disappears into the field. Use colourway 06 (mono paper) instead — the dot takes the ink.

Never

07

- Never rebuild it in a font. There is no typeface this is set in — every curve is drawn.
- Never put the mark inside another shape (circle, badge, ring). The tile is the only container.
- Never pair the wordmark with the word "ACE" in type. It already says it.
- Never animate the period as a loading spinner. It marks things that are finished.

Embroidery

- Tile only, 25mm minimum. The naked mark's counter fills with thread below that.
- Two threads: ink + emerald. Satin stitch, 0.4mm pull compensation on the bowl.
- The dot is a separate colour stop — never blend or gradient it.
- One-thread alternative: colourway 05, all ink.

Die-cut vinyl / stickers

- Cut the tile silhouette, 20mm minimum. Bleed 1mm.
- The bare emerald dot is also an approved standalone die-cut — the only case where the dot appears without the mark.

Screenprint & single-colour

- Two-colour: ink + #00875A. Pantone match: nearest is **Pantone 340 C** — confirm on press, never eyeball from a screen.
- One-colour, engraving, laser, foil, fax: colourway 05. The dot becomes the same ink and the mark still reads.

Platform icons

SLOT	SIZE	FILE
Favicon	16 / 32	ace-favicon.svg
Apple touch	180	tile, squared
PWA	192 / 512	tile
Maskable	512	full-bleed, mark at 0.5× safe zone

Motion

One rule: **the period lands last**. The letter arrives, settles, and then the dot appears — because the dot means the thing is finished, and finishing happens at the end.

SEQUENCE	CURVE	NEVER
Mark fades and settles 0–320ms · dot appears 320–420ms · nothing after. Total under half a second.	One easing for everything: cubic-bezier(.165, .84, .44, 1). No bounce, no overshoot, no spring.	Spinning, pulsing, looping, or using the dot as a progress indicator. A resolved mark does not fidget.

With other logos

10

When ACE appears beside a partner mark, separate them with a **1px ink rule** and **2R of space** on each side. Match optical height, not bounding-box height — our mark is wider than it is tall, so matching boxes makes us look smaller than we are.

We never build a combined lockup with another organisation, and we never imply university endorsement — see the playbook, §19.
